Instantaneous Heat Transfer To The Cylinder Wall
In Reciprocating Compressors

ABSTRACT

R.P. Adair, Engineer,
Firestone Tire and Rubber Company, Noblesville, Indiana

E.B. Qvale, Professor,
Laboratoriet for Energiteknik, Danmarks Tekniske Højskole, Denmark

J.T. Pearson, Associate Professor,
School of Mechanical Engineering, Purdue University, Lafayette, Indiana

Existing correlations for heat transfer in reciprocating compressors and engines are reviewed, discussed, and compared. The significance of obtaining accurate instantaneous heat transfer data is discussed. An experimental investigation of the instantaneous refrigerating compressor is reported. An expression which correlates the time averaged data within 20% is presented.
